

camurus®

Company presentation

November 2025

Forward looking statements

This presentation contains forward-looking statements that provide our expectations or forecasts of future events such as new product developments and regulatory approvals and financial performance.

Camurus is providing the following cautionary statement. Such forward-looking statements are subject to risks, uncertainties and inaccurate assumptions. This may cause actual results to differ materially from expectations and it may cause any or all of our forward-looking statements here or in other publications to be wrong. Factors that may affect future results include currency exchange rate fluctuations, delay or failure of development projects, loss or expiry of patents, production problems, unexpected contract, patent, breaches or terminations, government-mandated or market-driven price decreases, introduction of competing products, Camurus' ability to successfully market products, exposure to product liability claims and other lawsuits, changes in reimbursement rules and governmental laws and interpretation thereof, and unexpected cost increases.

Camurus undertakes no obligation to update forward-looking statements.

Camurus snapshot

Rapidly growing commercial stage company

Leader in opioid dependence treatment with Buvidal® and Brixadi® weekly and monthly depots

Advancing late-stage pipeline with blockbuster potential

Prospect for multiple new approvals in endocrinology and rare disease indications

Unique FluidCrystal® technology platform

Commercially validated with a broad range of applications

Strong operational and financial performance

Sustainable profitability since 2022

Listed on
Nasdaq Stockholm
Ticker **CAMX**;
Employees: **275+**

Significant recent progress

Commercial execution

- Global leadership in long-acting treatment of opioid dependence
- Double-digit Buvidal sales growth in Europe, Australia and MENA
- Best-in-class US launch of Brixadi
- Establishment of own commercial infrastructure in the US
- Ocyesa® in acromegaly launched in Germany

Advancing R&D pipeline

- Ocyesa approved in the EU and UK for the treatment of acromegaly
- Positive results from POSITANO Phase 2b study main part
- SORENTA Phase 3 study advancing in GEP-NET
- Positive results from Phase 1b study of once-monthly semaglutide

Corporate development

- Solid financial performance with high profitability
- Meaningful investment in R&D
- Strong cash position
~ SEK 3.5 billion – no debt
- License agreement with Lilly for FluidCrystal® long-acting incretins

Strong financial development

Revenues

- One-time revenue related to Brixadi US approval
- Revenues excl. one-times for Brixadi US approval

Profit before tax

- One-time revenue related to Brixadi US approval
- Profit before tax excl. Brixadi US approval revenue

Full year 2025 guidance

*Revenue**

SEK 2.3 – 2.6 billion
+ 23 – 39% vs. 2024

Profit before tax

SEK 0.9 – 1.2 billion
+ 63 – 117% vs. 2024

* Revised 6 November 2025

Creating sustainable impact

Advancing innovation and access to medicines

- Camurus' commitment to improving the lives of patients with severe and chronic diseases has a clear positive sustainability impact

Creating value while minimizing environmental footprint

- Delivering patient and societal benefit while minimizing environmental footprint and risks across the value chain

Focused strategy across the value chain

- Structured efforts across four areas: patients, people, planet, and responsible business

Top-tier ESG rating performance

- Strong results in leading ESG ratings reflect high standards in sustainability, ethical business practices, and long-term risk management

Learn more at camurus.com/sustainability

FluidCrystal[®] extended-release technology

- ✓ Easy and convenient administration
- ✓ Rapid onset & long-acting release
- ✓ Controlled by composition, liquid crystal phase structure and biodegradation
- ✓ Applicable across substance classes
- ✓ Compatible with prefilled syringes, autoinjector pens, and other advanced devices
- ✓ Manufacturing by standard processes

Broad and diversified product portfolio and pipeline

Other clinical stage programs include CAM2032 (prostate cancer), CAM2043 (PAH⁴), and CAM2047 (CINV⁵)

Opioid dependence – an escalating global health crisis

Largest society burden of all drugs¹

- 60 million opioid users worldwide¹
- Escalating US opioid overdose deaths²

High need for better access to care and new treatment alternatives

Significant limitation with current daily medications

- Burdens and stigma of daily medications, limited treatment compliance, medication diversion, misuse and unintended pediatric exposure

High US overdose death rate

¹United Nations: World drug report 2024; ²www.cdc.gov/nchs/nvss/vsrr/drug-overdose-data.htm

Opioid
dependence

camurus®

Buvidal – game changing opioid dependence treatment

Weekly and monthly, subcutaneous buprenorphine for individualized treatment of opioid dependence within a framework of medical, social and psychological treatment in adults and adolescents 16 years or over¹

“Buvidal became my way out”

Justin, Buvidal patient in Australia

Buvidal has demonstrated significant benefits to patients and society

- ✓ Superior treatment outcome and patient satisfaction¹⁻⁴
- ✓ Blocks subjective opioid effects from first dose²
- ✓ Reduces treatment burden and improve quality of life^{4,5}
- ✓ Decrease risk of diversion, misuse and pediatric exposure^{6,7}
- ✓ Provides cost savings⁸

Global leadership in long-acting opioid dependence treatment

Wide and growing access to Buvidal and Brixadi

- Available across four continents

Strong growth of Buvidal in Europe and Australia

- Double-digit growth for six consecutive years
- Estimated 67,000 in treatment with Buvidal in Europe and Australia end of September 2025
- Target more than 100,000 patients on Buvidal in 2027

Increasing Brixadi market share in the US

- Camurus' licensee Braeburn launched in Sep 2023
- Strongest launch ever in therapy area
- Brixadi est. peak market potential > USD 1 bn¹

Growing scientific evidence base

Strong scientific support for Buvidal/Brixadi

– More than 240 scientific publications

Octreotide SC depot, CAM2029

CAM2029 is a long-acting octreotide in development for three serious rare disease indications

- ✓ Acromegaly
- ✓ Gastroenteropancreatic neuroendocrine tumors (GEP-NET)
- ✓ Polycystic liver disease (PLD)

Designed for enhanced efficacy and patient convenience vs. current somatostatin receptor ligands (SRLs)

CAM2029 designed to address key limitations of current first-generation SRLs

- ✓ Ready-to-use FluidCrystal® technology
- ✓ Rapid onset and long-acting octreotide release¹
- ✓ 5-fold octreotide bioavailability vs Sandostatin LAR with potential for improved efficacy¹⁻³
- ✓ State-of-the-art, pre-filled autoinjector pen enabling convenient patient self-administration
- ✓ Subcutaneous administration with thin needle (22-gauge, 12.5mm)
- ✓ Room temperature storage

CAM2029 provides high SRL exposure

~5x higher octreotide plasma exposure for CAM2029 vs. Sandostatin LAR

- CAM2029 octreotide plasma levels in the range of immediate release octreotide

Comprehensive CAM2029 clinical program

A patient-centric acromegaly treatment

Acromegaly is a rare, slowly progressive, chronic and serious condition typically caused by a tumor of the pituitary gland and overproduction of growth hormone. This results in excess growth of bones and tissue and a range of other symptoms and, if untreated, to premature death.

Positive results from ACROINNOVA 1 – CAM2029 provided robust biochemical control

ACROINNOVA 1 study design

- 24-week, randomized, double blind, placebo-controlled Phase 3 study

Patient population

- Biochemically controlled on first-generation SRL*

Superiority achieved

- 77.2% vs. 37.5% patients with $\text{IGF-1} \leq 1 \text{ ULN}$ with CAM2029 versus placebo, $p=0,00018$

IGF-1 levels well controlled

CAM2029 improved

- Treatment convenience
- Acromegaly quality of life
- Patient satisfaction

CAM2029 was well tolerated

- Safety profile comparable to well established profile for first generation SRLs
- Most AEs were mild or moderate and transient injection site reactions and gastrointestinal side-effects
- No serious reactions related to CAM2029

Positive topline results from ACROINNOVA 2

ACROINNOVA 2 study design

- 52-week, open-label safety study with further extension

Patient population

- New patients; uncontrolled or controlled with $\text{IGF-1} < 2 \times \text{ULN}$
- Patients who completed ACROINNOVA 1

Improved acromegaly symptoms with CAM2029

ACROINNOVA 2 results

- Reinforcing long-term safety and effectiveness in ACROINNOVA 1
- Increased response rate from SoC baseline in new recruited patients
- Roll-over placebo patients from ACROINNOVA 1 regained IGF-1 control with CAM2029

Improved patient reported outcomes for CAM2029 vs standard-of-care baseline

- Treatment satisfaction
- Quality of life
- Injection experience

Positive ACROINNOVA 2 extension study data

Improved biochemical response for patients during treatment with CAM2029

TSQM – treatment satisfaction questionnaire for medication

* Transferred to standard-of-care (SoC) – either octreotide LAR or lanreotide Autogel – after completion of ACROINNOVA 2 main part. When ACROINNOVA extension study started, patients were reinvited to join study for another year on CAM2029. Time on SoC between 15 to 95 weeks (median 35 weeks)

Medical information and dissemination of ACROINNOVA results

Pre-launch activities

- Meeting with acromegaly stakeholders
- National and regional advisory board meeting
- Payer engagement and submissions
- Commercial and medical affairs readiness

Oczyesa - the first monthly subcutaneous octreotide depot¹⁻³

Autoinjector pen

Oczyesa is indicated for maintenance treatment in adult patients with acromegaly who have responded to and tolerated treatment with somatostatin analogues.¹

5-fold bioavailability vs octreotide LAR with potential for improved efficacy^{1,2,5}

Convenient and easy self-administration to improve patients' treatment experience¹⁻³

Autoinjector pen with a hidden, thin (22-gauge) needle^{1,4}

Stored at room temperature and ready to use^{1,4}

LAR – Long-acting release

1. Oczyesa® Summary of Product Characteristics (SmPC), Camurus AB, Sweden. June 2025; 2. Tibergh F et al. Br J Clin Pharmacol 2015;80:460–72; 3. Pavel M et al. Cancer Chemother Pharmacol 2019;83:375–85; 4. Ferone D et al. J Clin Endocrinol Metab 2025;110:1729–39; 5. Glatard A et al. Clin Pharmacokinet. 2025;64(7):1079–1092.

Internal photographic material

Initiating the European launch of Oczykesa

Start in wave 1 countries

- Significant switch opportunity from SoC
 - Est. 3,000 – 5,000 acromegaly patients on first generation SRL treatments
 - Additional 500 – 800 newly diagnosed patients start treatment every year
 - Notably, current estimates indicate significantly higher numbers, representing a potential upside

Positive response from physicians and patients

- Appreciated product profile and clinical evidence
- High willingness to switch to Oczykesa
- Promising initial response from payers

Teams in place and ready to go

- ~10 sales representatives, 5 MSLs and 3 market access

Planning PMA submissions in wave 2

Oczykesa wave 1 countries

LAUNCHED IN GERMANY 1 NOVEMBER 2025

Oczyesa[®]
(octreotide)
prolonged-release
solution for injection

Individuals shown are AI generated models, not real patients

Considerable opportunity in Germany

~2,000 target patients in Germany¹⁻⁵

Market potential in Germany

– SRL acromegaly annual sales ~EUR 50 million⁶

German physician's positive to Oczykesa profile

"It will make it possible to treat acromegaly much more effectively and with fewer complications."

"It is a self-injection with a subcutaneous pen. Everyone knows this from the weight loss jabs. That's a blockbuster."

"Autoinjector – means that one can self-administer but without seeing the needle and that is unique."

"It's very positive. And very different from all the other treatments we have for acromegaly. Hopeful. Very, very good I would say."

High interest to switch to treatment with Oczykesa

– Physician indicate that initially 30 – 60% of patients are suitable for switching to Oczykesa

Potential to become new standard of care for GEP-NET

Neuroendocrine tumors are cancerous tumors originating from cells in the endocrine and nervous system. The tumors can occur throughout the body, most common they occur in the gastrointestinal tract and lungs. The disease can be chronic with serious symptoms and complications.

SORENTO assessing CAM2029 superiority in PFS vs SoC in patients with GEP-NET

Randomized, active-controlled Phase 3 study

- Randomized, multi-center, open-label, active-controlled Phase 3 study of CAM2029 vs. long-acting octreotide or lanreotide in patients with GEP-NET
- Fulfills regulatory requirements for safety and efficacy

Patient population

- Patients with confirmed, advanced and well-differentiated GEP-NET (grade 1 to grade 3).
- SORENTO has a majority Grade 2 NETs

Primary endpoint

- Superiority in progression free survival, PFS, vs. standard of care (first-line medical treatment), hazard ratio 0.65
- Assessed after 194 documented PFS events

Secondary endpoints include

- Overall survival
- PROs (e.g., treatment satisfaction, quality of life)
- Safety

Recruitment completed end 2023

- 332 patients enrolled across 12 countries, exceeded randomization target (302)

Positive results from POSITANO in polycystic liver disease

Polycystic liver disease is a rare, genetic, and chronic disorder characterized by progressive growth of cysts in the liver, which can cause severe symptoms and result in impaired quality of life for patients.

Polycystic liver disease

Disease characteristics and prevalence

- Progressive growth of liver cysts of various sizes
- Estimated 37,000 target patients with symptomatic polycystic liver disease (PLD) in US, EU4 and UK¹
- No available pharmacological treatment for PLD

Treatment options

- Somatostatin receptor ligands show promise in clinical studies: decreasing liver volume, symptoms, and improving quality of life in symptomatic patients PLD²⁻⁴
- CAM2029 has orphan drug designation for ADPLD in EU and the US and ongoing applications for PLD associated with AKPKD

POSITANO – Phase 2b study in PLD

Trial design

- 53-week randomized, placebo-controlled, three-arm study
- Open label extension for 120 weeks

Key eligibility criteria

- Symptomatic PLD (isolated or associated with ADPKD)
- htTLV $\geq 1800\text{ml/m}$ at screening

Primary endpoint

- Liver volume change from baseline to week 53 compared to placebo

Key secondary endpoint

- Camurus' developed PRO, PLD-S

Secondary endpoints

- Total liver cyst volume
- Total kidney volume in ADPKD patients
- PLD symptoms and quality of life
- Safety
- PK and immunogenicity

POSITANO met the primary endpoint

Reduction in height adjusted total liver volume change with CAM2029 vs baseline

Main and sensitivity analyses for the primary endpoint Week 53

Treatment difference between CAM2029 groups and placebo

CAM2029 reduces liver cyst volume vs placebo

Total liver cyst volume change from baseline

Difference CAM2029 vs placebo

POSITANO topline results summary for CAM2029

Efficacy conclusions

- **Reduction of liver volume growth vs placebo**
 - Primary endpoint supported by sensitivity analyses
- **Reduction of total liver cyst volume growth vs placebo**
- **Kidney volume reduction indicated in patients with PLD associated with ADPKD**
- **Improved PLD symptoms**
 - Reduction of PLD-S score versus baseline
 - Improved symptoms indicated in several additional PROs (PLD-Q, PGI-S, CGI-S)
- **Robust decrease of IGF-1 vs placebo**

Safety profile

- **Treatment generally well tolerated**
- **Safety profile consistent with that of other injectable SRLs**
- **No new or unexpected safety issues were identified**
- **High study and treatment retention**
- **All eligible patients entered the extension phase**

CAM2029 recent milestones and expected progress ahead

AcroInnova™

Pivotal randomized placebo controlled and long-term safety trials in acromegaly

- ✓ ACROINNOVA Phase 3 program completed
- ✓ **EC market approval in June 2025**
- ✓ **MHRA UK approval in August 2025**
- ✓ **Oczyesa first launch in Germany in November 2025**
- **NDA resubmission with potential new PDUFA H1 2026**

SORENTO™

Subcutaneous Octreotide Randomized Efficacy in Neuroendocrine Tumors

- ✓ SORENTO Phase 3 start Q4 2021
- ✓ SORENTO fully enrolled Q4 2023
- **Target number PFS events exp. mid to late 2026**

positano™

Polycystic liver Safety and efficacy Trial with subcutaneous Octreotide

- ✓ Orphan drug designation for PLD in EU and US
- ✓ Positive POSITANO study results in June 2025
- ✓ **Orphan designation for ADPKD in the US and EU**
- **End-of-phase 2 meeting with FDA early 2026**

Significant sales potential for CAM2029 across indications

CAM2029 peak sales estimates >2 billion USD across indications¹⁻³

	TERRITORY	PATIENT POPULATION	EST. PEAK PATIENT SHARE	EST. PEAK SALES
ACRO ¹	EU/AUS	16,500 ⁴	20 – 35%	€30 – 65 million
	US	10,000	25 – 40%	\$150 – 280 million
NET ¹	EU/AUS	68,000 ⁴	30%	€300 – 400 million
	US	37,000	40%	\$1,200 – 1,500 million
PLD ¹	EU/AUS	15-18,000 ⁴	30 – 40%	€80 – 100 million
	US	12-13,000	30 – 40%	\$200 – 300 million

¹ Globe Life Science 2020-22, data on file;

² Assuming €10-12.5k (EU/AUS) and \$60-70K (US) per year net pricing in acromegaly, €15-20k (EU/AUS) and \$80-100K (US) per year net pricing in NET, and €17.5k (EU/AUS) and \$60K (US) per year net pricing in PLD

³ Patient numbers extrapolated from EU4+UK estimates by assuming same prevalence across European countries and Australia

Early-stage programs

Several early-stage programs advancing

- ✓ Completed treatment in Phase 1b study of monthly semaglutide (CAM2056)
 - ✓ Positive topline results announced
- ✓ Partnership with Eli Lilly for long-acting incretins progressing

Phase 1b study of once-monthly semaglutide

Randomized Phase 1b study comparing CAM2056 with once-weekly semaglutide (Wegovy®)

– Assessing pharmacokinetics, pharmacodynamics and safety in 80 participants with overweight or obesity

Study design

Positive top-line results from Phase 1b study of CAM2056

Similar or greater reduction of body weight, A1c and fasting glucose

- ✓ CAM2056 produced dose-dependent PD response
 - Weight change from baseline to Day 85 was -9.3% for CAM2056 10 mg versus -5.2% for weekly semaglutide per label; treatment difference -4.1% (-7.1%, -1.1%), $p=0.008$
 - Mean A1c change from baseline to Day 85 for CAM2056 10 mg was -0.44%; treatment difference vs weekly semaglutide -0.32% (-0.50%, -0.14%), $p<0.001$
- ✓ Comparable C_{max} at four times the dose of weekly semaglutide (Wegovy®)
 - Prolonged time to C_{max} and extended release, consistent with monthly dosing

CAM2056 was well tolerable with a consistent safety profile

- ✓ Similar safety and tolerability to weekly semaglutide dosed according to label
 - No new or unexpected safety events
 - The most common adverse events were mild to moderate and transient GI events
 - Limited number of injection site reactions; all mild and transient
- ✓ Dose escalation was well tolerated up to highest initiation in group 5, which showed a tendency for more GI events
- ✓ Few discontinuations; 1-2 per CAM2056 group* vs 2 for weekly semaglutide

Weight reduction from baseline

Next steps – CAM2056

Phase 2b study planned in 2026, including

- Dose initiation and escalation schedule established in Phase 1b study
- Extended treatment exposure to establish long term safety

Parallel preparations for Phase 3

- Progress final product presentation
- Authority discussions

Potential indications

- Type 2 diabetes
- Weight management
- Inflammation
- Neuropsychiatric disorders
- Substance use disorders

License agreement with Lilly on long-acting incretins

Partnership focused on long-acting therapies based on FluidCrystal and Lilly's proprietary drug compounds

- Lilly obtained license to research, develop, manufacture and commercialize long-acting incretin products based on FluidCrystal
- Includes up to four Lilly proprietary drug compounds within the exclusivity scope:
 - Dual GIP and GLP-1 receptor agonists
 - Triple GIP, glucagon and GLP-1 receptor agonists
 - An option to include amylin receptor agonists

Camurus eligible to receive:

- Up to \$290 million in license fees, development and regulatory milestone payments
- Up to \$580 million in sales-based milestone payments
- Tiered mid-single digit royalties on global net product sales

Camurus progressing towards Vision 2027

- Diversifying the business through commercial expansion and pipeline advances
- Adding inorganic growth through business development

5x

Five-fold revenue growth
(to SEK 4.5 billion)

Establishment of US
commercial infrastructure

4

Approvals for four R&D
pipeline programs

~50%

Operating margin
around 50 percent

Significant near-term opportunities

- Continued Buvidal growth in Europe and RoW
- Increasing Brixadi penetration in the US
- Oczyesa launch execution in Europe (first wave markets)
- US marketing approval of Oclaiz in acromegaly
- Clinical results for CAM2029 in GEP-NET
- Diversification through business development
